

HOOK-ON SYSTEM

Our expanded metal ceiling adopts hook-on system, simple and convenient. It only takes 4 steps to finish our expanded metal ceiling installation successfully. It features easy installation, removal and roof system maintenance, which makes it one of the most popular ceiling installation ways.

Step 1 →

Fix the light steel main channel.

Expansion bolts and main carrier fittings are used to hang the light steel main carrier under the roof.

Step 2 →

Adjust the main carrier plane.

Make all main carriers in the same horizontal plane by moving the expansion bolt up and down.

Step 3 →

Connect main carriers and cross carriers.

Cross connector clamps are used to connect cross carriers to main carriers.

Step 4 →

Install hook-on expanded metal ceiling panels.

Hook the hook-on expanded metal ceiling panels onto the carrier system and the ceiling installation is finished.
